## EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Zalobsky on 17 June 2009.

The application has been amended as follows:

Claim 33 is amended to read -- A decoupler assembly for transferring torque between a shaft and an endless power transmitting element, said decoupler assembly comprising:

a hub that is adapted to be coupled to the shaft such that the shaft co-rotates with the hub about a rotational axis:

a carrier that is rotatable relative to the hub;

a torsion spring concentric with the rotational axis of the decoupler assembly and extending between a hub end and a carrier end for transferring rotary power between the hub and carrier;

a pulley rotatably coupled to the hub, the pulley having an outer periphery that is adapted to engage the endless power transmitting element, the pulley having an inner surface formed therein:

Application/Control Number: 10/519,591

Art Unit: 3657

a clutch spring formed only of wire, the clutch spring having a first end that is fixedly coupled to the carrier, a second end opposite the first end and a plurality of coils between the first and second ends, the clutch spring exiting the carrier and extending toward the inner surface of the pulley such that at least one of the plurality of coils is engaged against the inner surface of the pulley when rotary power is transmitted from the pulley to the hub, the plurality of coils contracting to at least reduce gripping engagement between the plurality of coils and the inner surface of the pulley in response to deceleration of the pulley relative to the carrier beyond a predetermined extent to permit the hub to rotate at a speed in excess of the pulley:

a lubricant disposed on coils of the clutch spring,

wherein the pulley and the hub cooperate to define an annular cavity in which the torsion spring and the clutch spring are disposed and wherein the torsion spring and the clutch spring are disposed in the annular cavity axially between the carrier and the hub -

Claim 65 is amended to read -- A decoupler assembly for transferring torque between a shaft and an endless power transmitting element, said decoupler assembly comprising:

a hub that is adapted to be coupled to the shaft such that the shaft co-rotates with the hub about a rotational axis;

a carrier that is rotatably mounted on the hub;

a torsion spring concentric with the rotational axis of the decoupler assembly and extending between a hub end and a carrier end for transferring rotary power between the hub and carrier, the torsion spring being axially compressed between the carrier and the hub and uncoiling as a magnitude of the rotary power transmitted between the carrier and the hub increases:

a pulley rotatably coupled to the hub, the pulley having an outer periphery that is adapted to engage the endless power transmitting element, the pulley having an inner surface formed therein;

a clutch spring formed only of wire with a square or rectangular cross-sectional shape, the clutch spring having a first end that is fixedly coupled to the carrier, a second end opposite the first end and a plurality of coils between the first and second ends, the clutch spring exiting the carrier in a radially outward direction and extending toward the inner surface of the pulley such that at least one of the plurality of coils is engaged against the inner surface of the pulley when rotary power is transmitted from the pulley to the hub, the plurality of coils contracting to at least reduce gripping engagement between the plurality of coils and the inner surface of the pulley in response to deceleration of the pulley relative to the carrier beyond a predetermined extent to permit the hub to rotate at a speed in excess of the pulley;

- a bearing disposed between the hub and the pulley; and
- a lubricant disposed on coils of the clutch spring;
- wherein the torsion spring and the clutch spring are coiled in opposite directions:

wherein the pulley and the hub cooperate to define an annular cavity in which the torsion spring and the clutch spring are disposed and wherein the torsion spring and the clutch spring are disposed in the annular cavity axially between the carrier and the hub; and

wherein at least one of the carrier and the hub includes a tapered ramp and an abutting wall that is perpendicular to the tapered ramp and wherein the torsion spring abuts each of the abutting walls --

## Allowable Subject Matter

With this amendment, claims 33-66 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art does not teach or suggest a decoupler assembly having a torsion spring between a carrier and hub and a clutch spring between a pulley and a carrier with a lubricant on the coils, wherein the clutch spring and the torsion spring are both positioned within an annular cavity defined by the pulley, carrier, and hub.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
